HEATROUTE — DEMO RECORDING MASTER PLAYBOOK

Bharat Build Tour · Track 02 (Heat & Water) · 3-Minute Video Production Guide

TARGET: 02:45 – 02:55

MAX LIMIT: 03:00

AWS CLOUD NATIVE

PART 1: OBS STUDIO MASTER CONFIGURATION (5 MINUTES TO SET UP)

OBS Video & Canvas Settings

- [ ] **Base & Output Resolution:** 1920×1080 (16:9 Full HD).
- [ ] **Framerate:** 30 FPS or 60 FPS (steady, no dropped frames).
- [ ] **Output Format:** MP4 or MKV (with Auto-Remux to MP4 enabled in Advanced Settings).
- [ ] **Encoder:** Hardware (NVENC / AMD / Intel QSV) or x264 Quality: CRF 18–20 (approx 6,000–8,000 Kbps).
- [ ] **Capture Source:** *Window Capture* on Google Chrome / Edge (capture cursor ON, avoid messy desktop icons).

Microphone Audio Filter Chain (OBS)

- [ ] **Filter 1 — Noise Suppression:** Method: *RNNoise* (good quality, removes fan & PC hum).
- [ ] **Filter 2 — Noise Gate:** Close threshold: -42 dB, Open threshold: -35 dB (eliminates keyboard clicks).
- [ ] **Filter 3 — Compressor:** Ratio: 3:1, Attack: 6ms, Release: 60ms (keeps voice consistently audible).
- [ ] **Filter 4 — Gain / Limiter:** Limiter at -1.5 dB (prevents harsh distortion/peaking).
- [ ] **Mic Distance:** 6 to 8 inches from mouth with pop filter or slight off-axis angle.

Browser Pre-Flight Checklist (1 Minute Before Hitting Record)

- [ ] **URL:** Open `http://localhost:3005/` (or live Amplify URL) in Chrome/Brave/Edge.
- [ ] **Clean Screen:** Press `F11` (Fullscreen) or hide bookmarks bar (`Ctrl+Shift+B`).
- [ ] **Zoom Level:** Reset zoom to **100%** (`Ctrl+0`).
- [ ] **Initial State:** Season = **Peak Heatwave**, Time = **1:30 PM (Apex)**, Corridor = **Rajiv Chowk**.
- [ ] **Audio Mute:** Make sure system sounds/Slack/WhatsApp notifications are on Do Not Disturb.
- [ ] **Hotkeys:** Set OBS Start/Stop Recording hotkey to `F9` or keep OBS on a second monitor.

PART 2: 3-MINUTE MASTER CHOREOGRAPHY & SPOKEN SCRIPT

Follow this exact second-by-second timeline. Practice speaking at a measured, confident speed (~130 words per minute). The script is tuned to finish between **2 minutes 45 seconds and 2 minutes 55 seconds**.

TIMESTAMP	ON-SCREEN ACTIONS (WHAT YOU DO)	WORD-FOR-WORD SPOKEN SCRIPT (WHAT YOU SAY)	JUDGE RUBRIC
`0:00 - 0:25` **ACT 1: The Problem Hook**	**ACTION:** Hover mouse slowly over the top climate banner: highlight **43.5°C Air Temp** and the flashing **59.8°C Heat Index Red Alert** badge. Keep map centered on Connaught Place.	"During peak Indian summers, ambient temperatures routinely exceed 44 degrees Celsius. For delivery gig workers, daily commuters, and pedestrians walking to metro stations, standard navigation apps optimize purely for **vehicular speed**. They route vulnerable walkers through unshaded asphalt corridors where the perceived heat index crosses 58 degrees. **Google Maps tells you the fastest way there; HeatRoute tells you the safest way there when heat kills.**"	Problem Clarity Track Alignment

TIMESTAMP	ON-SCREEN ACTIONS (WHAT YOU DO)	WORD-FOR-WORD SPOKEN SCRIPT (WHAT YOU SAY)	JUDGE RUBRIC
`0:25 - 0:55` **ACT 2: The Core Innovation**	🖱️ **ACTION:** 1. Click **Barakhamba Road Direct** card (turns red/amber, high exposure). 2. Click **Kasturba Gandhi Marg** or **CP Colonnade** card (turns green, shaded). 3. Hover over **65% Canopy** and **-22.4% Heat Exposure** badge.	"Here on our central Delhi testbed from Rajiv Chowk to Mandi House, Barakhamba Road is the shortest path, but exposes walkers to wide blacktop asphalt radiating extreme ground heat. In contrast, HeatRoute's microclimate engine evaluates Kasturba Gandhi Marg. By dynamically computing **65% tree canopy coverage and building shadows**, it **slashes thermal strain by 22.4%** for a minor detour of just two and a half minutes."	Technical Depth Core Value Prop

HEATROUTE — 3-MINUTE DEMO SCRIPT (CONTINUED)

ACTS 3 – 7

Acts 3 through 7 · Production Execution & Closing

TIMESTAMP	ON-SCREEN ACTIONS (WHAT YOU DO)	WORD-FOR-WORD SPOKEN SCRIPT (WHAT YOU SAY)	JUDGE RUBRIC
0:55 – 1:20 **ACT 3: Safety-First Hard Filters**	🖱️ **ACTION:** Scroll sidebar down slightly to show the greyed-out **Vehicular Flyover Shortcut (REJECTED_UNSAFE)** card. Hover over the red violation badge: *"Prohibited pedestrian highway"*.	"Crucially, HeatRoute is grounded in real-world pedestrian reality. A vehicular expressway flyover shortcut might be mathematically shorter, but our **Hard Safety Filter** instantly disqualifies it because it lacks sidewalks and segregated pedestrian infrastructure. **Our hierarchy is strict: Safety first, thermal comfort second, travel speed third.**"	Algorithmic Rigor Real-World Safety
1:20 – 1:50 **ACT 4: Diurnal Time-Travel**	🖱️ **ACTION:** 1. Drag time slider at the bottom from **1:30 PM** backward to **09:00 AM**. 2. Pause 1 second, then smoothly drag forward to **05:00 PM**. 3. Point cursor to how solar altitude angles, route shade %, and advisory update in real time.	"Urban microclimates are not static. Watch our diurnal solar engine in action: as I adjust the departure time slider, our backend re-computes solar altitude and azimuth angles in real time. Notice how at 5:00 PM, **lengthening building shadows** turn previously scorched streets into protected corridors. HeatRoute recalculates candidate routes to match the exact hour you walk."	Solar Geometry Dynamic UI Reactivity
1:50 – 2:15 **ACT 5: Track 02 Hydration Layer**	🖱️ **ACTION:** 1. Click **Water & Rest Stops** toggle button on the map (top-right of map). 2. Click a water droplet pin on map (e.g., **Delhi Jal Board Public Water Post** or **Bangla Sahib**). 3. Click **+ Add Route Waypoint** inside popup — show polyline snap to pitstop!	"Heat resilience requires active physical hydration. Fulfilling Track 02 requirements, HeatRoute integrates a verified network of municipal water kiosks, Delhi Jal Board posts, and community shelters like Gurudwara Bangla Sahib. With one click, walkers can insert a verified drinking water stop directly into their walking route with automatic dwell-time adjustments."	Track 02 Core Feature Municipal GIS
2:15 – 2:40 **ACT 6: Dual-Season Monsoon Mode**	🖱️ **ACTION:** 1. In the header bar, click **Monsoon Flood** seasonal toggle. 2. Notice interface switches to rain mode. 3. Show **Minto Road Sunken Underpass** getting rejected with flood hazard warning (1.8m inundation). 4. Show route rerouting via covered colonnades.	"Climate vulnerability in Indian cities is dual-season: scorching heatwaves are followed by torrential monsoon downpours. With a single toggle, HeatRoute activates **Monsoon Flood Mode**. It immediately flags waterlogged sunken underpasses—like Delhi's infamous Minto Bridge—and reroutes pedestrians through covered colonnades and elevated sidewalks with zero standing water."	Dual-Hazard Innovation Disaster Resilience
2:40 – 3:00 **ACT 7: AWS Architecture & Closing**	🖱️ **ACTION:** 1. Click **AWS Architecture Telemetry** pill in top-right. 2. Modal opens displaying Amazon Location Service, AWS Lambda Mangum, DynamoDB,	"Under the hood, HeatRoute is built cloud-native on AWS: **Amazon Location Service** streams dark vector navigation maps, **AWS Lambda** executes our thermal engine in milliseconds, **DynamoDB** stores verified water kiosks, and our frontend is hosted on **AWS Amplify**.	AWS Cloud Native Memorable Closing

TIMESTAMP	ON-SCREEN ACTIONS (WHAT YOU DO)	WORD-FOR-WORD SPOKEN SCRIPT (WHAT YOU SAY)	JUDGE RUBRIC
	and CloudWatch metrics. 3. End with cursor on the bold HeatRoute logo.	**HeatRoute: Built for the heat that dries the tap, and the monsoon that floods the street. Thank you!**"	

PART 3: LIVE RECORDING SECRETS & SUBMISSION CHEATSHEET

SUBMISSION KIT

Pro-Tips, Pronunciation Guide, and Hackathon Submission Fields

🎙️ Speaking & Vocal Delivery Rules

- [ ] **Energy Level:** Sound excited and purposeful, not like you are reading off a paper. Lean slightly forward.
- [ ] **Pronunciation:**
  - *Connaught Place:* "Kuh-NOT Place" (or CP).
  - *Mandi House:* "Mun-dee House".
  - *Barakhamba:* "Barah-kham-ba".
  - *Diurnal:* "Die-er-nuhl" (daily cycle of sun).
- [ ] **Mouse Movement:** Move mouse deliberately. Never shake or circle the mouse rapidly. Hover over an element for at least 1.5 seconds so judges can read it.
- [ ] **If You Stumble:** Don't restart from 0:00! Pause for 2 seconds in silence, re-say the sentence cleanly, and trim the 2 seconds out in a quick editor (like Clipchamp/CapCut) later if needed.

📦 Hackathon Submission Metadata (Copy-Paste)

Project Title: HeatRoute — Thermal-Aware Pedestrian Navigation & Recovery Layer

Tagline: Heat-aware pedestrian routing and microclimate intelligence for Indian cities, built on AWS.

Track: Track 02 — Heat & Water (WeMakeDevs Bharat Build Tour)

Live Amplify URL:
`https://main.d1n8kxpr67xo92.amplifyapp.com`

AWS Services Used: Amazon Location Service, AWS Lambda, Amazon DynamoDB, Amazon CloudWatch, AWS Amplify.

Tech Stack: React + Vite, MapLibre GL JS, FastAPI (Python 3.11), Pydantic, Rothfusz Heat Index Equation.

⏱️ Recording Time Budget Table (Strict 3-Minute Limit)

Act #	Key Topic	Target Start	Target End	Duration
Act 1	Problem Hook & Urban Heat Gap	0:00	0:25	25s
Act 2	Core Route Comparison (Canopy vs Asphalt)	0:25	0:55	30s
Act 3	Safety Filters & Disqualified Flyovers	0:55	1:20	25s
Act 4	Diurnal Sun Position & Shadow Shift	1:20	1:50	30s
Act 5	Track 02 Hydration POIs & Pitstop Waypoints	1:50	2:15	25s
Act 6	Monsoon Flood Mode (Minto Hazard)	2:15	2:40	25s
Act 7	AWS Cloud Architecture & Strong Closing	2:40	2:55	15s
TOTAL RUNTIME		**0:00**	**02:55**	**175s (Buffer: 5s under 3:00 max)**

💡 **Final Golden Rule for Hackathon Submission:** Evaluators review dozens of videos. The opening 20 seconds determine their interest, and the live demonstration of Track 02 (Hydration Waypoint + Monsoon Mode) guarantees full points on the challenge theme. Keep your energy high, hit your marks, and stop the recording at **2:55**!
